

My HSEQ Management System

What is MyHSEQ Management Systems?

Safe-T Plan is the flagship of Get Safe Training (GST), combining industry expertise and cutting edge technologies. Safe-T Plan is an online, fully integrated, risk management system for WH&S, Environmental and Quality Assurance compliance, including the management of human resources records such as training, health management and performance.

Safe-T Plan combines one or more of the products listed in this brochure to provide what can be a paperless management solution for your business.

What is its purpose?

Safe-T Plan provides a clear structure of responsible process, assisting in assuring the quality of goods and services in supplier/customer relations. It is applicable to any manufacturing or service organisation irrespective of size and the product or service supplied.

Why is it important?

Do you want Peace of Mind that You have a system in place designed to help Protect Yourself and Your Company against Non-Compliance, Violations, Citations, law suits and Prosecution, and Your Employees against Injury?

Managing workplace safety is an important goal that many corporations have recognised as a logical and effective way to provide a better working environment for employees and to cut corporate costs. A key component in safety management is the software system used to record, manage, and analyse safety-related data. With an effective system, the safety team can see exactly where incidents and unsafe situations are occurring and take proactive steps to eliminate them.

What are the benefits?

The system helps an organisation enhance customer satisfaction, achieve consistency and improve internal processes, all while meeting compliance needs.

Key benefits include:

- Products and services that meet applicable statutory and regulatory requirements
- Improved productivity and efficiency from a trained workforce committed to continuous improvement
- Enhanced communications
- A means to measure your progress towards continual improvement of business performance
- Improved focus on processes, thus a reduction of dependence on individuals for results
- Strong focus on 'prevention' rather than correction
- A competitive advantage as organisations today require management systems to be in place for suppliers and subcontractors in order to conduct business with them
